GEOG6304: Practical Lab 03
CARTOGRAPHIC WORKSHOP and ONLINE PORTFOLIO

For this practical we will be revisiting some of our previous work, dressing them up, creating a new map and posting all of our work to an online portfolio.

PART ONE: Dressing Up Previous Work

1. From **Practical 1**, open your finished **Ugly** map. Based on today's lecture of reminders, spend a little more time on this map to fix issues you now see. Once you are happy with your new and improved map, export it as a JPG or PDF.

2. From **Homework01**, select **2** of the **5** maps you created of Vietnam. Refine your work and with your map looking the way you want, export each as a JPG or PDF.

PART TWO: New Map – Affected Districts of Nepal

1. Create a single map of Nepal, highlighting the **14 priority districts** following the 2015 earthquakes. This map, <u>at a minimum</u>, is to show the **districts**, **regions** and **earthquake locations**.

2. **All** of the listed layers above are to be neatly labelled using Annotation Groups as shown in class. For reminders, visit the video library on Blackboard. There are some on creating and placing text. Some other data is provided in your folders to use.

PART THREE: Online Portfolio using Pathbrite
Pathbrite is site where you can create and online portfolio very easily. You can upload various types of documents and group them by theme. Some of the document types include, image files like JPG, GIF and PNG and also, MS Word, MS Excel and PDF documents among others can be posted. This portfolio can then be shared with others by sending them a link to view online.

1. Go to pathbrite.com and create a free account.

2. Create your portfolio by uploading your maps, choosing a colour scheme and theme. You are welcome to add more content as you like.

3. We'll grade your finished maps on the Pathbrite site.
